

WE WOODEXPERT

3D CAD software for furniture design
and manufacturing

CERTIFIED
Solution
Partner

3D SOLIDWORKS

COMPATIBLE WITH **3D SOLIDWORKS**

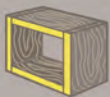

Optimization through automation - discover an intuitive 3D CAD software designed to increase the productivity and work comfort in the furniture and woodworking industry.

WOODEXPERT supports all stages of working on a furniture project, including: 3D modeling, generation of 2D documentation, bills of materials, cost estimates, production reports and the process of preparing packages for safe storage and transportation.

DESIGN

DESIGN

Smooth workflow is the key to productivity, so the interface is arranged in a clear, easy-to-use way according to the natural flow of users' activities. 3D modeling with WOODEXPERT is all about easy editing. With perfectly designed material management the software detects errors and allows you to fix them quicker than ever. As a result, you eliminate the risk of material losses in the production process.

DOCUMENTATION

2D DOCUMENTATION

Allows for instant generation of 2D documentation. With one click, automatically, you create subassembly drawings with the data necessary for production: any number of views, dimensions, CAM format, veneers, edgebanding, grain direction.

BOM MANAGER

BOM MANAGER

Generates all the data necessary for product pricing and production. In addition to the bill of materials, it has been enhanced with the packaging function. You can share the project data with parties who don't have WOODEXPERT - as an html report or 3D pdf.

CAM

CAM

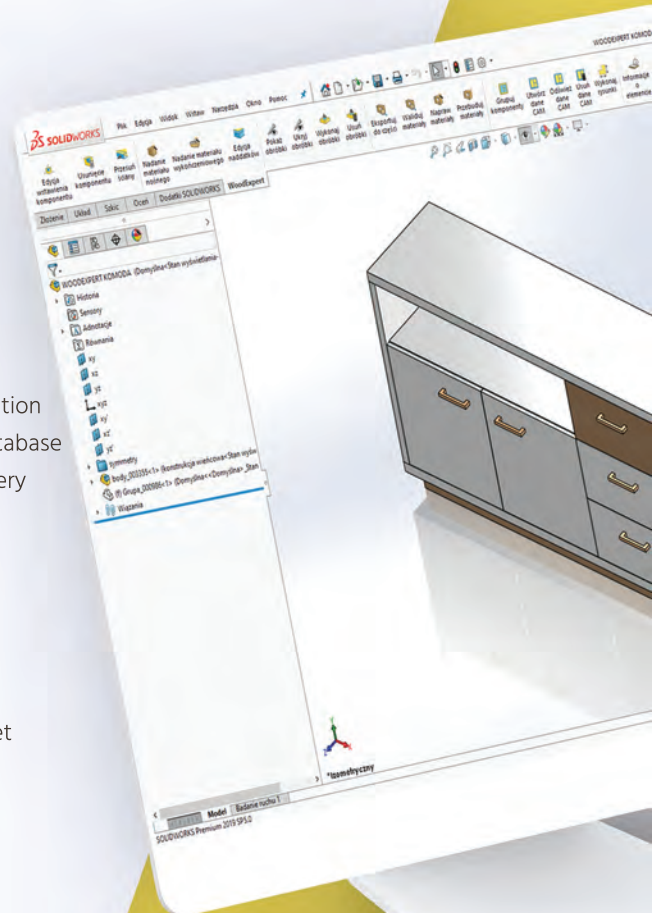

Automation is the key. WOODEXPERT gives you a smooth transition from design to production. CAM is based on a technological database which allows you to set up standard strategies and tools for every machine in our factory. All programs are created automatically, but with the ability to adjust parameters and paths as needed.

NESTING

NESTING

The NESTING module allows you to download a list of boards included in the project and assign them to the appropriate sheet based on the given material and board thickness.

Why choose WOODEXPERT?

REDUCING WORKING TIME

The furniture design process should be quick, easy and error-free. When creating WOODEXPERT we focused on reducing the number of steps performed during furniture modeling as much as possible. In our software you can easily generate drawings, custom material lists and programs with only three clicks. It will help you to reduce time of preparing data more than 95%.

INTEGRATION WITH ERP AND PDM SYSTEMS

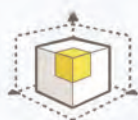

Created with Industry 4.0 idea in mind, the software is perfectly suited to the integration of intelligent machines, systems and processes. The structure of the created files and data allows for easy integration with ERP and PDM systems.

COST REDUCTION

Reducing designing time and limiting errors occurring in the production lower yours operating costs, which in turn contributes to increasing the competitiveness of the company on the market.

Make your work faster, more convenient and efficient thanks to:

INTELLIGENT COMPONENT INSERTION

allows quick prototyping and easy editing of the inserted components.

ASSISTED ASSIGNMENT OF CORE AND FINISHING MATERIALS

quickly assign materials to designated parts according to a user-defined scheme.

SURPLUSES WITH PREVIEW

gives the possibility to control the technological allowances of bearing and finishing materials and the angle of the grain.

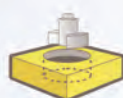

MATERIAL LEGEND WITH VARIANTS

you can create material legends and expand them with further color variants.

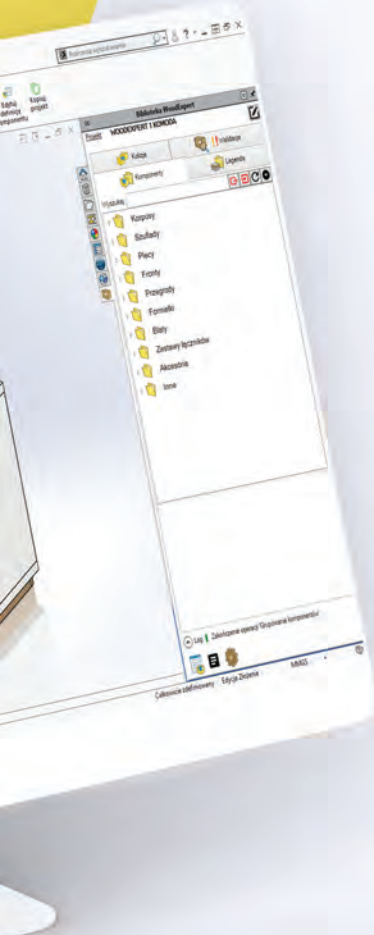

TECHNOLOGICAL COLLISION DETECTION

allows you to detect collisions between components of an assembly and categorize them to avoid manufacturing errors early on in the prototyping.

HOLE FOR FASTENERS

"Execute machining" operation transfers the machining of fittings and accessories to the board hole. Changing dimensions or machining configurations transfers them to the model.

We support our clients by delivering solutions and services for planning, implementing, managing, and monitoring digital transformation, using a unique and innovative approach based on three pillars: Consult (advisory and support), Engage (solutions and implementation), and Connect (communities for sharing experiences and best practices). With more than 35 years of experience working with over 25,000 SME customers, Visiativ generated revenue of €300 million in 2024. Visiativ operates in 15 countries across Europe, North America, and South America, employing more than 1,600 people. Visiativ is part of the Groupe SNEF.

WE WOODEXPERT

Automation is the key. WOODEXPERT gives you smooth transition from the design to the production phase. Automation not only reduces work time and eliminates human mistakes, but also unifies all documentation. By integrating WOODEXPERT with SOLIDWORKS, you'll instantly generate NC code for any numeric machine, and the built-in component packaging tool will help you prepare packages of finished furniture for safe storage and transport.

Save your time and money, improve the product quality and accelerate business growth.
